This seminar will address the use of inappropriate external cladding materials installed on high-rise buildings that have been identified as a major contributor to substantial fires in Australia, the United Kingdom, China and the Gulf region. These fires have been the catalyst for an amendment to Volume One of the 2016 edition of the National Construction Code. The background and an overview of this amendment will be presented. Diverse means of facilitating the use of appropriate cladding materials will also be presented. Presenter Biography

Mr Ray Loveridge
CPEng, FIEAust
